

CAS Factory Smoke Test

Two-worker parallel spawn · Computer jokes · Lifecycle verification

 2026-06-30

 Session cas-src-sharp-viper-85

 15:09–15:17 UTC

 Tasks cas-73ba & cas-2650

Executive Summary

OUTCOME

 **Pass**

Both tasks closed, verified

WORKERS SPAWNED

2

claude-jester · codex-jester

JOKES DELIVERED

14

7 per worker (2 overlap)

REPO EDITS

0

Both worktrees clean

SPAWN-TO-FIRST-JOKE

~44 s

claude-jester (fastest)

LIFECYCLE BLOCKERS

1

VERIFICATION_JAIL on cas-2650

Session Timeline

- 15:09:04 **daemon** — Factory daemon started (session cas-src-sharp-viper-85); bound WS on 127.0.0.1:40879
- 15:09:07 **wild-gopher-49** — Supervisor registered (codex MCP client v0.142.4)
- 15:09:10 **director** — Startup instructions delivered to supervisor (prompt_queue msg 2454)
- 15:12:51 **daemon** — codex-jester spawned in new worktree .cas/worktrees/codex-jester (branch factory/codex-jester)
- 15:12:53 **codex-jester** — Registered (codex MCP client v0.142.4, model gpt-5.4, effort high)
- 15:12:55 **daemon** — claude-jester spawned in new worktree .cas/worktrees/claude-jester (branch factory/claude-jester)
- 15:12:55 **claude-jester** — Registered (claude-code v2.1.196, model claude-sonnet-4-6)
- 15:12:55 **director** — Startup prompt injected to claude-jester (msg 2455)
- 15:13:06 **director** — Task assignment event delivered to claude-jester
- 15:13:26 **supervisor** — Task assignments pushed: cas-73ba → claude-jester (msg 2457); cas-2650 → codex-jester (msg 2456)
- 15:13:39 **claude-jester** — 7 jokes delivered to supervisor (msg 2458); task cas-73ba closed verified
- 15:13:43 **codex-jester** — ACK with execution plan sent (msg 2459)

- 15:14:07 codex-jester — 7 jokes delivered to supervisor (msg 2464)
- 15:14:25 codex-jester — Close attempt → VERIFICATION_JAIL_BLOCKED
- 15:14:37 codex-jester — Correctly reported blocker to supervisor (msg 2466); did not retry or spawn verifier
- 15:15:01 supervisor — Called verification tool; issued code ver-d8867b57e6e3 to codex-jester (msg 2467)
- 15:15:13 codex-jester — Task cas-2650 closed verified (msg 2468)
- 15:16:34 supervisor — Created report task cas-6af0; assigned to claude-jester (msg 2471)
- 15:16:48 director — Task assignment event delivered to claude-jester
- 15:16:52 supervisor — Report task assignment message delivered (msg 2471/2472)

😄 Worker Joke Output (14 total)

Source: prompt_queue messages 2458 (claude-jester→supervisor) and 2464 (codex-jester→supervisor), retrieved from .cas/cas.db. Two jokes appear in both outputs (marked overlap).

CLAUDE-JESTER (CLAUDE-SONNET-4-6) · CAS-73BA	CODEX-JESTER (GPT-5.4 HIGH) · CAS-2650
1 Why do programmers prefer dark mode? overlap Because light attracts bugs.	1 Why do programmers prefer dark mode? overlap Because light attracts bugs.
2 A SQL query walks into a bar, approaches two tables and asks... "Can I join you?"	2 There are 10 kinds of people in the world: overlap Those who understand binary and those who don't.
3 Why don't programmers like nature? It has too many bugs and no documentation.	3 I told my computer I needed a break... and now it won't stop sending me beach wallpapers.
4 How many programmers does it take to change a light bulb? None — that's a hardware problem.	4 Why did the developer go broke? Because he used up all his cache.
5 A programmer's wife says: "Get a gallon of milk, and if they have eggs, get a dozen." He comes home with 12 gallons of milk. "They had eggs."	5 My code doesn't have bugs. It just develops random features.
6 Why was the JavaScript developer sad? Because they didn't Node how to Express their feelings.	6 Why was the computer cold? It left its Windows open.

There are 10 types of people in the world: overlap

Those who understand binary, and those who don't.

7

I asked the keyboard for advice...

but it just kept giving me mixed signals.

Worker CAS Rule-Following Evaluation

claude-jester (claude-sonnet-4-6) · Task cas-73ba

Check	Result	Notes
Loaded MCP schemas first (ToolSearch)	PASS	First action was ToolSearch(select:mcp__cas__task,mcp__cas__memory,mcp__cas__search), per CLAUDE.md instruction.
Loaded cas-worker skill	PASS	Invoked cas-worker skill immediately after schema load.
action=mine to discover assignment	PASS	Called mcp__cas__task action=mine correctly; saw cas-73ba.
action=start before working	PASS	Started task before any work began.
action=show to read task details	PASS	Read full task spec including acceptance criteria.
ACK sent to supervisor before executing	MINOR	For the initial assignment (cas-73ba) no explicit ACK was sent; worker delivered jokes directly. Supervisor had assigned via message but the workflow guidance calls for ACK. For the follow-on task cas-6af0, claude-jester did ACK correctly.
Delivered ≥5 jokes to supervisor	PASS	7 jokes delivered via coordination message (msg 2458) to supervisor wild-gopher-49.
Zero repository file edits	PASS	git status --short on worktree .cas/worktrees/claude-jester: empty (exit 0). No M/D/A lines.
Closed task with reason	PASS	CAS returned "Closed task: cas-73ba (verified) (lease released)".
Messaged supervisor on completion	PASS	Sent completion notification in the coordination message that also contained the jokes.

Check	Result	Notes
Did not send peer-to-peer messages	PASS	All coordination messages targeted wild-gopher-49 (supervisor). No peer messages attempted.
Used CAS task tools, not built-in TodoWrite	PASS	Only mcp__cas__task actions used for task tracking.

codex-jester (gpt-5.4, effort=high) · Task cas-2650

Check	Result	Notes
ACK with execution plan sent before executing	PASS	Sent explicit ACK (msg 2459): "1) send jokes; 2) avoid repo edits; 3) verify worktree; 4) close." Contrast with claude-jester which skipped the initial ACK.
mcp__cs__task action=start before working	PASS	Task notes confirm start action called. Used correct Codex MCP alias mcp__cs__.
Delivered ≥5 jokes to supervisor	PASS	7 jokes delivered via coordination message (msg 2464) to supervisor.
Zero repository file edits	PASS	Task notes include proof: <code>git status --short</code> exit 0; <code>git diff --stat</code> exit 0; no output. Worktree <code>.cas/worktrees/codex-jester</code> confirmed clean.
Ran verify-before-claim proof	PASS	Explicitly logged proof commands + exit codes in task notes (progress note at 15:14).
VERIFICATION_JAIL_BLOCKED handling	PASS	Did NOT retry close, did NOT spawn a verifier agent. Forwarded exact blocker message to supervisor (msg 2466) and waited. Followed the recovery guide precisely.
Closed after supervisor verification	PASS	Closed with provided code ver-d8867b57e6e3; CAS returned verified+released. Confirmed in msg 2468.
Used CAS task tools, not built-in TodoWrite	PASS	Only mcp__cs__task actions used; no built-in task tools observed.
Did not send peer-to-peer messages	PASS	All messages targeted supervisor only.
Decision note for close-gate scope waiver	PASS	Logged note_type=decision explaining why the 6 pre-close checks (wiring, signatures, etc.) were not applicable for a message-only deliverable.

Supervisor & Director Behaviour

Supervisor: wild-gopher-49 (codex, gpt-5.4)

- Spawned both workers in rapid succession (4-second gap, codex-jester first).
- Assigned tasks via coordination messages within ~35 s of spawn — prompt delivery confirmed in prompt_queue (msgs 2456–2457).
- Did not attempt to start tasks directly. (An earlier session—eager-leopard-33—hit the supervisor-cannot-start-tasks guard at 14:58; this session avoided it.)
- Acknowledged claude-jester's output immediately (msg 2460, <7 s after delivery).
- Correctly handled VERIFICATION_JAIL for cas-2650: called the verification MCP tool (id=33, 15:15:01), generated code ver-d8867b57e6e3, and provided the exact close command to codex-jester (msg 2467).
- Monitored both workers concurrently while each was active.
- Delegated the report task cas-6af0 to claude-jester once both smoke tests closed.

Notable gap: Attempted to load cas-codex-supervisor-checklist skill (log id=9, 15:09:55) — not found. Recovered promptly; no workflow interruption.

Director (CAS daemon · factory-session layer)

- Delivered supervisor startup instructions at 15:09:10 via director_events channel (msg 2454).
- Notified supervisor of both worker spawns via director_events at 15:12:54 and 15:12:56 (<1 s after each spawn).
- Delivered task assignment events to claude-jester at 15:13:06 and 15:16:48 (for cas-73ba and cas-6af0 respectively).
- Delivered director event to codex-jester at 15:13:02 for task assignment.
- Supervisor notifications at 15:13:43, 15:15:13 (task lifecycle events).
- Cleaned up orphaned teams dir deadlock-test-team on startup.
- Cleaned up stale agent from previous session on init (Primary, ppid 413633 not running).

Observation: Two MCP transport errors on startup (Vercel auth + context7 content-type) are pre-existing and unrelated to the smoke test. Both recovered automatically; no impact on factory operation.

Evidence Sources Reviewed

LOG .cas/logs/cas-2026-06-30.log — 295 lines; full daemon lifecycle, agent registrations, MCP tool calls, prompt_queue delivery timestamps, spawn details, and worker registration events for both workers.

DB .cas/cas.db → prompt_queue rows 2454–2473 — Full text of all coordination messages between director, supervisor, claude-jester, and codex-jester during the smoke test. Provided exact joke text for both workers.

TASK mcp_cas__task action=show id=cas-73ba — Task record, notes (close reason), acceptance criteria, timestamps. Confirmed closed 15:13, no repo edits.

TASK `mcp__cas__task action=show id=cas-2650` — Task record with progress notes, decision note, proof commands (`git status/diff` exit 0), verification jail blocker, close with verification code. Confirmed closed 15:15.

GIT `git -C .cas/worktrees/codex-jester status --short` and `git -C .cas/worktrees/claude-jester status --short` — Both returned empty output (exit 0), confirming no repository file modifications by either worker.

GIT Daemon log lines 123 and 145: worktree creation confirmed with `reused=false` for both workers, on branches `factory/codex-jester` and `factory/claude-jester` respectively, parented on `main`.

✓ **Verdict**

Area	Result	Summary
claude-jester CAS rule following	PASS	All major rules followed. One minor gap: no explicit ACK sent for the initial assignment (corrected on subsequent task cas-6af0).
codex-jester CAS rule following	PASS	Exemplary: ACK sent, proof logged, VERIFICATION_JAIL handled by the book, decision note filed. Zero deviations.
Supervisor behaviour	PASS	Smooth orchestration. Handled the JAIL blocker correctly. One harmless skill-name miss on startup (<code>cas-codex-supervisor-checklist</code> not found) did not impair operations.
Director behaviour	PASS	All lifecycle events delivered correctly and promptly. Session cleanup and orphan removal on startup worked as expected.
Overall smoke test	PASS	Both workers spawned, produced jokes, communicated correctly, and closed without repo modifications. Factory infrastructure functioned end-to-end.
